International Handbook of Metacognition and Learning Technologies Roger Azevedo 2013-04-23
Education in today's technologically advanced environments makes complex cognitive demands on students pre-learning, during, and post-learning. Not surprisingly, these analytical learning processes--metacognitive processes--have become an important focus of study as new learning technologies are assessed for effectiveness in this area. Rich in theoretical models and empirical data, the *International Handbook of Metacognition and Learning Technologies* synthesizes current research on this critical topic. This interdisciplinary reference delves deeply into component processes of self-regulated learning (SRL), examining theories and models of metacognition, empirical issues in the study of SRL, and the expanding role of educational technologies in helping students learn. Innovations in multimedia, hypermedia, microworlds, and other

platforms are detailed across the domains, so that readers in diverse fields can evaluate the theories, data collection methods, and conclusions. And for the frontline instructor, contributors offer proven strategies for using technologies to benefit students at all levels. For each technology covered, the Handbook: Explains how the technology fosters students' metacognitive or self-regulated learning. Identifies features designed to study or support metacognitive/SRL behaviors. Reviews how its specific theory or model addresses learners' metacognitive/SRL processes. Provides detailed findings on its effectiveness toward learning. Discusses its implications for the design of metacognitive tools. Examines any theoretical, instructional, or other challenges. These leading-edge perspectives make the *International Handbook of Metacognition and Learning Technologies* a resource of great interest to professionals and

researchers in science and math education, classroom teachers, human resource researchers, and industrial and other instructors.

Advances in Neural Information Processing

Systems 8 David S. Touretzky 1996 The past decade has seen greatly increased interaction between theoretical work in neuroscience, cognitive science and information processing, and experimental work requiring sophisticated computational modeling. The 152 contributions in NIPS 8 focus on a wide variety of algorithms and architectures for both supervised and unsupervised learning. They are divided into nine parts: Cognitive Science, Neuroscience, Theory, Algorithms and Architectures, Implementations, Speech and Signal Processing, Vision, Applications, and Control. Chapters describe how neuroscientists and cognitive scientists use computational models of neural systems to test hypotheses and generate predictions to guide their work. This work includes models of how networks in the owl brainstem could be trained for complex localization function, how

cellular activity may underlie rat navigation, how cholinergic modulation may regulate cortical reorganization, and how damage to parietal cortex may result in neglect. Additional work concerns development of theoretical techniques important for understanding the dynamics of neural systems, including formation of cortical maps, analysis of recurrent networks, and analysis of self-supervised learning. Chapters also describe how engineers and computer scientists have approached problems of pattern recognition or speech recognition using computational architectures inspired by the interaction of populations of neurons within the brain. Examples are new neural network models that have been applied to classical problems, including handwritten character recognition and object recognition, and exciting new work that focuses on building electronic hardware modeled after neural systems. Using Homework Assignments in Cognitive Behavior Therapy Nikolaos Kazantzis 2005-12-05

Homework is a central feature of Cognitive-Behavioral Therapy (CBT), given its educational emphasis. This new text is a comprehensive guide for administering assignments. The first part of the text offers essential introductory material, a comprehensive review of the theoretical and empirical support for the use of homework, models for practice, and systems for evaluating client compliance and therapist competence in administering assignments. Part two focuses on the role of homework in cognitive therapy, demonstrating successful methods of integration and discussing solutions to common barriers. Rather than offering one-size-fits-all, pre-designed tasks, this book illustrates application of a model with detailed case study and recommendations for adjusting administration methods for particular problems and

specific client populations. Over the last nine chapters, homework administration is described within cognitive and behavioral therapy for anxiety and depression, chronic pain, delusions and hallucinations, obsessions and compulsions, marital and sexual problems, personality disorders, children and adolescents, group and family therapy, and older adults. Readers are provided with a full range of knowledge to successfully incorporate individualized homework assignments into their practice to maximize the proven long-term benefits of CBT.

[From Conditioning to Conscious Recollection](#) Howard Eichenbaum 2004-11-18 This cutting-edge book offers a theoretical account of the evolution of multiple memory systems of the brain. The authors conceptualize these memory systems from both behavioral and neurobiological perspectives, guided by three related principles. First, that our understanding of a wide range of memory phenomena can be advanced by breaking down

memory into multiple forms with different operating characteristics. Second, that different forms of memory representation are supported by distinct brain pathways with circuitry and neural coding properties. Third, that the contributions of different brain systems can be compared and contrasted by distinguishing between dedicated (or specific) and elaborate (or general) memory systems. A primary goal of this work is to relate the neurobiological properties of dedicated and elaborate systems to their neuropsychological counterparts, and in so doing, account for the phenomenology of memory, from conditioning to conscious recollection.

The Theatrical Professoriate Emily Roxworthy
2019-12-16 This book argues that today's professoriate has become increasingly theatrical, largely as a result of neoliberal policies in higher education, but also in response to an anti-intellectual

scrutiny that has become pervasive throughout the Western world. *The Theatrical Professoriate: Contemporary Higher Education and Its Academic Dramas* examines how the Western professoriate increasingly finds itself enacting command performances that utilize scripting, characterization, surrogation, and spectacle—the hallmarks of theatricality—toward neoliberal ends. Roxworthy explores how the theatrical nature of today's professoriate and the resultant glut of performances about academia on stage and screen have contributed to a highly ambivalent public fascination with academia. She further documents the "theatrical turn" witnessed in American higher education, as academic institutions use performance to intervene in the diversity issues and disciplinary disparities fueled by neoliberalism. By analyzing academic dramas and their audience reception alongside theoretical approaches, the author reveals

how contemporary academia drives the professoriate to perform in what seem like increasingly artificial ways. Ideal for practitioners and students of education, ethnic, and science studies, *The Theatrical Professoriate* deftly intervenes in Performance Studies' still-unsettled debates over the differential impact of live versus mediated performances.

Cue-enhancement as a function of task-set Walter C. Cogel 1967 Under flight conditions, as well as in other situations, judgments of the distances between objects may depend upon a variety of possible cues. In this study, the hypothesis was tested that the intention to use a particular cue relation would

enhance the effectiveness of that particular cue in determining the resulting perception. For this purpose, a situation was presented in which the apparent depth position of an object in a configuration of objects would differ depending upon which of two possible cue relations (size cues) were used. The results support the conclusion that the perceived depth position of the object differed in the expected directions as a function of the task-set. The data of the study are discussed with respect to the 'adjacency principle' which states that cue efficiency is determined by the relative adjacency of objects between which the cues occur. Although the effect of cue-set upon the perception seems to be small compared with that of adjacency, it cannot completely be ignored. (Author).

A New Handbook for Singers and Teachers Richard Alderson 2020-03-25 The practices of singing and teaching singing are inextricable, joined to each other through the necessity of understanding the vocal art and craft. Just as singers must understand the physical functions of voice in order to become musically proficient and artistically mature, teachers too need to have a similar mastery of these ideas - and the ability to explain them to their students - in order to effectively guide their musical and artistic growth. With this singer-instructor relationship in mind, Richard and Ann Alderson's *A New Handbook for Singers and Teachers* presents a fresh, detailed guide about how to sing and how to teach singing. It systematically explores all aspects of the

vocal technique - respiration, phonation, resonance, and articulation - with each chapter containing exercises aimed at applying and teaching these principles. Beyond basic vocal anatomy and singing fundamentals, the handbook also covers such understudied topics as the young voice, the changing voice, and the aging voice, along with helpful chapters for teachers about how to organize vocal lessons and training plans. Thoughtfully and comprehensively crafted by two authors with decades of singing and teaching experience between them, *A New Handbook for Singers and Teachers* will prove an invaluable resource for singers and teachers at all stages of their vocal and pedagogical careers.

Observations of a Results Oriented Conservative
Steven Gamelin 2007-12-01 In "Observations of a

Results Oriented Conservative," Steve Gamelin isn't afraid to apply moral values to politics and other aspects of life. He provides Conservatives with an understanding of the validity of their instincts by objectively looking at Liberals and their behavior. Just as he did in order to create this bold moral analysis of the flaws of Liberals, Gamelin advises readers to adopt the following guidelines in their observations of the behavior of those around them: Use the "eyes of truth" to see through the deception and spin of Liberalism Apply good judgment to come to sound conclusions See the simplicity of what a lie is and evaluate those individuals who promote the lie Know why spin is nothing more than another word for lie Evaluate the sound bite and determine its intent Ignore conventional wisdom and evaluate for yourself Replace political correctness with moral correctness And most importantly, understand the Nixon Factor and how

much it tells us about the Liberal It is not a political statement to want a moral government, says Gamelin, and it is not dirty politics to point out corruption within government.

Sex, Drugs, And Hiv/aids In Brazil James Inciardi

2018-05-15 At the beginning of the twenty-first century, Brazil ranked second only to the United States in the number of reported cases of AIDS.

Because Brazil's extensive poverty and inequality, its fragile economic situation, and its limited network of health services, the scarce

prevention/intervention resources targeted only the most visible at risk populations -- gay men, sailors, prostitutes, and street children. Virtually forgotten were Brazil's hidden drug users, as well as the tens of millions of individuals living in the country's thousands of favelas, or shantytowns, which are a characteristic part of almost every Brazilian city. In *Sex, Drugs, and HIV/AIDS in Brazil* the authors examine the emergence of AIDS in Brazil, its linkages to drug use and the sexual culture, and its epidemiology in such populations as cocaine users, "street children," and male transvestite prostitutes. Special attention is focused on an HIV/AIDS community outreach program established in Rio de Janeiro, which represented the first such prevention/intervention program in all of Brazil targeting indigent cocaine users. This 6-year initiative was funded by the U.S. National Institute on Drug Abuse, and carried out by the

authors of this book. The research combines anthropological, sociological, and biological perspectives; all data were gathered through empirical and ethnographic techniques.
