Piezoelectric surgery of impacted teeth Angelo Cardarelli

2020-07-23T00:00:00+02:00 The extraction of impacted dental elements is often referred to maxillofacial surgeons. However, it can be handled as routinely as any other type of extraction. Piezoelectric surgery of impacted teeth, which involves reproducible procedures using a step-by-step approach in all types of cases, also allows dentists who approach the extraction of impacted elements less frequently to carefully prepare for the procedure and perform it, thereby minimizing possible postsurgical issues for the patient, such as biological risks. Using the most innovative techniques, including the application of ultrasound in oral surgery and piezoelectric surgery, the author provides an indispensable tool to train and update dentists who intend to perform all types of extractions. Strengths • This manual presents a protocol—unique in its kind—for the extraction of impacted teeth with the use of a piezoelectric instrument. • This is the first manual to examine piezoelectric surgery of all impacted dental elements (not only wisdom teeth); in other volumes, the patient is treated only in individual chapters. • The clarity of the text is enhanced with images and surgical photographs that illustrate every step of the cases presented.

What is the material of the artifact? What are the characteristics of the substrates? Is it possible to adequately isolate the tooth? It is fundamental to answer these questions when performing the assessment before beginning the final and decisive phase of prosthetic restoration: cementation. Cementation is a complex procedure that requires good skills, and its outcome depends on the knowledge of the substrates involved and the choice of the most suitable cement for the specific situation. The materials and techniques used for cementation are described in this text, which is specifically dedicated to prosthetists and to those who practice conservative dentistry. This manual examines each substrate and defines the cementation protocols for all cases in daily practice.
