*Inquiry and the National Science Education Standards*

National Research Council 2000-05-03 Humans, especially children, are naturally curious. Yet, people often balk at the thought of learning science--the "eyes glazed over" syndrome. Teachers may find teaching science a major challenge in an era when science ranges from the hardly imaginable quark to the distant, blazing quasar. *Inquiry and the National Science Education Standards* is the book that educators have been waiting for--a practical guide to teaching inquiry and teaching through inquiry, as recommended by the National Science Education Standards. This will be an important resource for educators who must help school boards, parents, and teachers understand "why we can't teach the way we used to." "Inquiry" refers to the diverse ways in which scientists study the natural world and in which students grasp science knowledge and the methods by which that knowledge is produced. This book explains and

illustrates how inquiry helps students learn science content, master how to do science, and understand the nature of science. This book explores the dimensions of teaching and learning science as inquiry for K-12 students across a range of science topics. Detailed examples help clarify when teachers should use the inquiry-based approach and how much structure, guidance, and coaching they should provide. The book dispels myths that may have discouraged educators from the inquiry-based approach and illuminates the subtle interplay between concepts, processes, and science as it is experienced in the classroom. *Inquiry and the National Science Education Standards* shows how to bring the standards to life, with features such as classroom vignettes exploring different kinds of inquiries for elementary, middle, and high school and Frequently Asked Questions for teachers, responding to common concerns such as obtaining teaching supplies. Turning to assessment, the committee discusses why assessment is important, looks at existing schemes and formats, and addresses how to involve students in assessing their own

learning achievements. In addition, this book discusses administrative assistance, communication with parents, appropriate teacher evaluation, and other avenues to promoting and supporting this new teaching paradigm. *Learning Analytics* Gwo-Jen Hwang 2018-12-18 Learning analytics is one of the most important research issues in the field of educational technology. By analyzing logs and records in educational databases and systems, it can provide useful information to teachers, learners, and decision makers – information which they can use to improve teaching strategies, learning performances, and educational policies. However, it is a great challenge for most researchers to efficiently analyze educational data in a meaningful way. This book presents various learning analytics approaches and applications, including the process of determining the coding scheme, analyzing the collected data, and interpreting the findings. This book was originally published as a special issue of *Interactive Learning Environments*.

**Behavioral Finance: The Second Generation** Meir Statman 2019-12-02 Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true

to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

**Mathematical Statistics and Data Analysis** John A. Rice 2006-04-28 This is the first text in a generation to re-examine the purpose of the mathematical statistics course. The book's approach interweaves traditional topics with data analysis and reflects the use of the computer with close ties to the practice of statistics. The author stresses analysis of data, examines real problems with real data, and motivates the theory. The book's descriptive statistics, graphical displays, and realistic applications stand in strong contrast to traditional texts that are set in abstract settings. **Innovations in Educational Change** David Hung 2019-08-07 This book offers an ecological perspective to understand the opportunities and complexities of spreading and sustaining educational innovations. It explores the imperatives underpinning educational reforms and identifies the role of schools in developing, disseminating, and sustaining changes in Singapore's educational context. It also includes international case studies that examine the dialectical relationships between structure, people and culture and demonstrate that cultivating ecologies involves leveraging affordances and resources across the education system to

create new contexts, synergies and capacities. Further, it argues that educational innovations and reforms also need to consider tacit knowledge and conditions of transfer, which may be ambiguous and challenging. Few books address the nuances and interactions of innovation and change across levels of the education ecology – from the micro (classroom), meso (organisation / school), exo (partners), macro (policy) and chrono (time scales) levels. The ecological perspective adopted in this book explores the dynamic tensions in order to understand the interplays of policy and school-level influences that contextualize school innovations. By presenting multiple voices and views, it allows impediments and affordances of innovation diffusion to be discussed holistically, which is an integral caveat for nurturing a sustainable ecology that enables innovations.

*Journey In Blue: A Peek Into The Workers' Party Of Singapore* Jenn Jong Yee 2020-12-18 After decades of overwhelming political domination by the People's Action Party (PAP), Singapore has entered a phase of political transition. It started with the loss of a Group Representation Constituency (GRC) in the 2011 general election (GE2011). After a huge rebound in the fortunes of the PAP in the 2015 general election following the death of founding Prime Minister Lee Kuan Yew, the transition resumed in the 2020 general election with the loss of yet another GRC. This book looks at the Workers' Party, Singapore's leading opposition party, through the eyes of Yee Jenn Jong, former Non-constituency Member of Parliament and Central Executive Committee member of the party. Jenn Jong took an unexpected leap into opposition politics just weeks before GE2011 and came out with a narrow loss of just one percent of the popular votes. In this book, he recounts his three contests in the general elections from 2011-2020, parliamentary work, and other activities in opposition politics. This book hopes to let readers better understand the nature of the work by opposition politicians in Singapore, which has been dominated by the PAP's narrative since 1959. The author also shares his thoughts on the shape of Singapore's politics going forward.

**Computational Intelligence in Digital Pedagogy** Arpan Deyasi 2020-11-19 This book is a useful guide for the teaching fraternity, administrators and education technology professionals to make good use of AI across outcome-based technical education (OBTE) ecosystem and infuse innovations and affordable digital technologies to traditional pedagogic processes to make teaching-learning more independent of human factor (teacher/student quality), time and place and at the same time more impactful and enjoyable for the learners. Providing access to the digital media and learning tools (even to the extent of mobile apps) to the students would allow them to keep pace with innovations in learning technologies, learn according to their own pace and improve their understanding level and have instantaneous feedback and evaluation. The book explores these new challenges and scope of using computational intelligence in educational technology. The book also

addresses how based on the data collected from the outcome of conventional educational system, intelligent diagnostic and feedback system is developed which will change the teaching strategies and corresponding teaching-learning process. The book covers a wider framework of digital pedagogy and its intelligent applications on various sectors of education system.

**Xu Bing** Sarah E. Fraser 2020-07-20 This volume offers a path-breaking reassessment of Xu Bing's oeuvre by analyzing the diverse cultural environments in which his work has developed since the Book from the Sky. It contains three lecture transcripts and eight art historical essays; these explore themes such as Xu's animal works, audience participation, new ink, prints, realism, socialist spectacle, and word play. A critical

question addressed in this volume is what carries art to a global level beyond regional histories and cultural symbols. New Englishes Joseph Foley 1988 The spread, functions and models of the New Englishes have become a dominant theme of the eighties. This volume addresses, specifically, the English used in Singapore in the

private and public domains, particularly the school system. The topics covered include: an overview of earlier studies and attempts at codification; a consideration of whether the formal mode of written Singapore English should be standardised; the problems of pronunciation; etc. and specific lexico-grammatical

problems which have proved to be ambiguous for those not familiar with Singapore English. Also included in this volume is the largest bibliography so far published on Singapore English with over 700 titles listed, thus providing an essential tool for any future research.
