Living Standards and Social Well-Being Deborah M. Figart
2013-09-13 Too many of the world's citizens face impoverished living standards. The economic and financial crises have made matters worse. The viewpoint of Living Standards and Social Well-Being is that the fundamental objective for an economy is provisioning, not simply efficiency. The chapters in this volume examine how economies across the globe

come to understand what constitutes a living and how they can improve living standards, including balancing paid work with family life and civic responsibility. The authors provide historical, theoretical, and empirical studies of moving economies at the macro level and households at the micro level toward improved living standards. It is argued that achieving well-being and decent living standards, through work and welfare state policies, is a social responsibility. Such

improvements could be delivered through basic income policies, family support, job guarantees, decent work, shorter work weeks, and support from social welfare. These issues are important for economics and the other social sciences and in particular for social economics. This book was published as a special issue of the Review of Social Economy.

EBOOK: Learning Disability

Gordon Grant 2010-05-16 "The editors have brought together a range of eminent contributors who present a range of issues throughout the life cycle. The book asserts that it hopes to 'assist readers to anticipate change and discontinuity in people's lives and think about strategies to support them' through the many challenges that they may face in their lives. In my view this book certainly does that and the editors and contributors are to be congratulated on the production of a relevant and contemporary text that I have no hesitation in both endorsing and recommending to all involved in supporting and or caring for people with learning disabilities." Professor Bob Gates, Project Leader - Learning Disabilities Workforce Development, NHS Education South Central, UK "The editors have gathered an authoritative faculty to present and discuss a range of contemporary issues;

both practical and ethical. The text is well grounded in the lived experience of people with disability and draws on the evidence-base of contemporary science. Each chapter includes thought provoking exercises. This is a seminal text for students and practitioners, researchers and policy makers." Associate Professor Keith R. McVilly, Deakin University, Australia "I currently own a copy of the first edition and it has proved an invaluable resource time and time again. There is not an essay I complete that does not make reference to the book and I can consistently use it to reflect back on my practice as a student nurse and social worker. Having read several extracts from the new edition it does appear to include very high quality content covering learning disabilities over the lifespan ... if I were to personally recommend any book for budding or current learning disability professionals then this would be it." James Grainger, Student Nurse/Social Worker, Sheffield

University, UK "I like the way it has primary and secondary information from a range of sources. The exercises in the book also get you to think about the situation in question which helps us think about our values and anti-oppressive practice ... This book really does start with the basics and having a learning disability from birth and the effects, to in depth knowledge and literature ... This book would be very helpful to me as it brings in literature policies and models from both a health and social side, which is important for my course and collaborative working." Laura Jean Lowe, Student Nurse, Sheffield Hallam University, UK "It is written with a clearly conveyed in-depth knowledge and in a way that has professional lived experience within the context of the work. The authors have taken into account the emotional, client-centred approach to the modern practitioner's practice ... The book gives a true wealth of good practice scenarios that can only help practitioners be

good at what they do and aspire to be." Lee Marshall, Student Nurse, Sheffield Hallam University, UK With its spread of chapters covering key issues across the life cycle this text has established itself as the foundational primer for those studying the lived experiences of people with learning disabilities and their families, and outcomes achieved through services and support systems. Recognising learning disability as a lifelong disability, this accessible book is structured around the life cycle. The second edition is refreshed and expanded to include seven new chapters, covering: Aetiology Breaking news (about disability) and early intervention Transition to adulthood The sexual lives of women Employment Personalisation People with hidden identities With contributions from respected figures from a range of disciplines, the book draws heavily upon multidisciplinary perspectives and is based on the latest research and evidence for practice

is informed by medical, social and legal models of learning disability, exploring how "learning disability" is produced, reproduced and understood. Extensive use is made of real-life case studies, designed to bring theory, values, policy and practice to life. Narrative chapters describe, in the words of people with learning disabilities themselves, their lives and aspirations. They helpfully show readers the kinds of roles played by families, advocates and services in supporting people with learning disabilities. New exercises and questions have been added to encourage discussion and reflection on practice. Learning Disability is core reading for students entering health and social care professions to work with people with learning disabilities. It is a compelling reference text for practitioners as it squarely addresses the challenges facing people with learning disability, their loved ones and the people supporting them. Contributors Dawn Adams, Kathryn Almack,

Dorothy Atkinson, Nigel Beail, Christine Bigby, Alison Brammer, Jacqui Brewster, Hilary Brown, Jennifer Clegg, Lesley Cogher, Helen Combes, Clare Connors, Bronach Crawley, Eric Emerson, Margaret Flynn, Linda Gething, Dan Goodley, Peter Goward, Gordon Grant, Chris Hatton, Sheila Hollins, Jane Hubert, Kelley Johnson, Gwynnyth Llewellyn, Heather McAlister, Michelle McCarthy, Alex McClimens, Roy McConkey, David McConnell, Keith McKinstrie, Fiona Mackenzie, Ghazala Mir, Ada Montgomery, Lesley Montisci, Elizabeth Murphy, Chris Oliver, Richard Parrott, Paul Ramcharan, Malcolm Richardson, Bronwyn Roberts, Philippa Russell, Kirsten Stalker, Martin Stevens, John Taylor, Irene Tuffrey-Wijne, Sally Twist, Jan Walmsley, Kate Woodcock

become the primary sector in terms of GDP and employment. Quality research and testing means better service, and success in the service industries demands quality. Nonetheless, complaints about insufficient, inconsistent or bad service abound. Quality decides on success and failure. Where so much is at stake, management decisions call for systematic research and consumers look for relevant results that provide guidance in complex markets. Research into quality and customer satisfaction gets to the core of a business. However, many so-called studies hardly meet essential criteria of empirical research and deliver artefacts rather than facts. This book puts an end to common misconceptions of quality studies. *Measuring Service Performance* is an appeal for an approach to quality research that meets quality criteria itself. It is a compelling argument against widespread but rather dubious dealings with measurement, data and statistics. Ralf Lisch calls for a

reconsideration of the research process, focussing on content instead of method and adding meaning to results. Because service excellence deserves research excellence. Written in a practical, accessible style, the book offers practitioners as well as market researchers, MBA students and others involved in the service sector a critical analysis and discussion of the essentials of 'Practical Research for Better Quality'.

Longevity and Quality of Life

Robert N. Butler 2012-12-06

Nations around the world are
experiencing a spectacular
increase in longevity. Society as
a whole is being challenged by
issues arising from this
revolution in longevity.

Although the specter of the
loneliness and existential
suffering of older citizens is
such that some people under
the age of 65 find it difficult to
conceive of a long-term future,
persons over 85 have proven
that aging does not necessarily
preclude a healthy and
productive life. Extraordinary
progress in both curative and
preventive medicine justifies
optimism about the quality of
life and state of well-being that
can be enjoyed even in great
old age. We should look to
professionals in diverse fields to
develop creative solutions to
the inevitable issues that will
arise with aging. Governments

must prepare for the future
health of their citizens by
making long-term investments
to educate all sectors of society
in the value of good nutrition,
exercise, and lifestyles that
enhance well-being throughout
life. Also, governments should
realize that the main cause of
health care expenditure is
serious illness which occurs in
persons of all ages, and not
predominantly in older people.
Early detection can help save
lives, as well. Health and
longevity of life will ultimately
end as a political issue. What is
needed is long-term
government investments
necessary for a viable health
policy. The question arises: will
world leaders be able to
commit to such a policy? Two
major socioeconomic
phenomena may have a
regulating effect on this issue.
The first is the emergence of
pressure groups that have
come into being in response to
a particular health issue, such
as AIDS. The second is the
emergence of ethics
committees in developed
nations that deal ~~solely with~~

solely with

health issues.

Sourcebook on the Foundations of Social Protection Delivery Systems Kathy Lindert

2020-10-29 The Sourcebook on the Foundations of Social Protection Delivery Systems synthesizes real-world experiences and lessons learned of social protection delivery systems from around the globe. It takes a broad view of social protection, covering various intended populations such as poor or low-income families, unemployed workers, persons with disabilities, and individuals facing social risks. It discusses many types of interventions that governments provide to individuals, families, or households, including categorical programs, poverty-targeted programs, labor benefits and services, disability benefits and services, and social services. The Sourcebook seeks to address concrete “how-to?” questions, including:

- How do countries deliver social protection benefits and services?
- How do they do so effectively and efficiently?
- How do they ensure dynamic

inclusion, especially for the most vulnerable and needy? • How do they promote better coordination and integration—not only among social protection programs but also among programs in other parts of government? • How can they meet the needs of their intended populations and provide a better client experience? The delivery systems framework elaborates on the key elements of that operating environment. The framework is anchored in core implementation phases along the delivery chain. Key actors, including people and institutions, interact all along that delivery chain. Those interactions are facilitated by communications, information systems, and technology. This framework can apply to the delivery of one or many programs and to the delivery of adaptive social protection. The Sourcebook structures itself around eight key principles that can frame the delivery systems mind-set: 1. There is no single blueprint for delivery systems, but there are commonalities from

arwsome.com

September 26, 2022 by
guest

and those common elements constitute the core of the delivery systems framework. 2. Quality of implementation matters, and weaknesses in any of the core elements will negatively affect the entire system, reducing the impacts of the program(s) they support. 3. Delivery systems evolve over time, in a nonlinear fashion, and their starting points matter. 4. Efforts should be made to “keep it simple” and to “do simple well,” from the start. 5. The “first mile”—people’s direct interface with administrative functions—is often the weakest link in the delivery chain; improving it may take systemic change but will greatly improve overall efficiencies and mitigate the risk of failures on the frontlines. 6. Social protection programs do not operate in a vacuum, and thus their delivery systems should not be developed in silos; synergies across institutions and information systems are possible and can improve program outcomes. 7. Social protection delivery systems can contribute more

broadly to government’s ability to serve other sectors, such as health insurance subsidies, scholarships, social energy tariffs, housing benefits, and legal services. 8. The dual challenges of inclusion and coordination are pervasive and perennial and encourage the continuous improvement of delivery systems, through a dynamic, integrated, and human-centered approach. Defense Issues 1996 The foundation years Frank Field 2010-12-15 Frank Field was commissioned by the Prime Minister in June 2010 to provide an independent review on poverty and life chances. This is the final report and the aim of the review was to; generate a broader debate about the nature and extent of poverty in the UK, examine the case for reforms to poverty measures, in particular for the inclusion of non-financial elements, explore how a child's home environment affect their chances of being ready to take full advantage of their schooling, recommend potential action by government

other institution to reduce poverty and enhance life chances for the least advantage consistent with the Government's fiscal strategy. The report demands a broadening of the attack on child poverty and supplies overwhelming evidence that children's life chances are most heavily predicated on their development in the first five years of life. Its family

background, parental education, good parenting and the opportunities for learning and development in those crucial years that together matter more to children than money. The Review has concluded that the UK needs to address the issue of child poverty in a fundamentally different way if it is to make a real change to children's life chances as an adult.
